Grayson Iller

DESIGN ENGINEER

San Mateo, CA Graysoniller@outlook.com linkedin.com/in/grayson-iller-a119b2202 vueniverse.com

Design engineer working at the seam of product design and front-end systems. Human factors psychology foundation, systems experience across drone platforms at Skydio, and VUE — a production fashion-drop platform designed and built solo, end to end. I design the product and ship the code.

EXPERIENCE

Device Platform Lead, Controller UI/UX · Skydio — Jun 2023 – Present · Intern May–Aug 2022

- Redesigned the test information architecture across drone platforms — restructured 5,500+ cases from system-shaped modules into flow-based operator user journeys, making experience gaps visible for the first time.
- Modeled controller-to-drone (Fusion) connectivity as a finite state machine to document UI-to-system state desync patterns — surfacing states where the system is degraded while the interface still reads "connected."
- Embedded with the design team during new-controller hardware bring-up, evaluating operator workflows on real devices and grounding interaction decisions in observed behavior under load.

Founder, Designer & Engineer · VUE — vueniverse.com — 2024 – Present

- Designed and built a fashion drop-tracking platform solo — product strategy, design system, front end, database, scrapers, and deploys — live in production with real users.
- Tracks 100+ brands into a single recency-ordered feed; built a component system on Radix/shadcn with an editorial design language on top.
- Engineered conversion UX with intent-based auth gating (browse freely, authenticate at point of action) and an SEO prerender pipeline scoring 97/98 on Lighthouse.
- Stack: React 18, TypeScript, Tailwind v4, Supabase (Postgres · Auth · Edge Functions), Vercel.

EDUCATION

B.S. Human Factors Psychology (HCI Focus), Minor in Aerospace Physiology — Embry-Riddle Aeronautical University. NCAA Division II athlete.

SELECTED PUBLICATIONS

"Pilot-in-the-loop technology for moon landings." IAF / IAA, 2022.

"The Link Between Spatial Disorientation in Flight and Mild Hypoxia." 2021.

CAPABILITIES

Design: Product design, design systems, IA, interaction & motion, human factors research

Engineering: React, TypeScript, Next.js, Tailwind, Supabase/Postgres, Vercel
